

The Zoo and Aquarium Association Australasia (ZAA) has a progressive, science-based approach to animal welfare. Using the Five Domains Model, ZAA grants accreditation to zoos and aquariums that have clearly demonstrated their commitment to positive welfare. This approach champions welfare from the animal's perspective and it underpins all members do.

## ZAA Accreditation: Animal Welfare

The Five Domains Model is a science-based structure for assessing animal welfare. It recognises that animals can experience feelings, ranging from negative to positive.

The first four domains all help inform us about an animal's various experiences, which make up the Mental Domain, the fifth domain.

### Government regulation

By law, the government requires zoos and aquariums to meet minimum standards to protect animals from having a bad life

### ZAA accreditation

The ZAA Accreditation Program goes further, using the Five Domains to focus on good animal welfare. It asks the question, is the animal having a fulfilling life?

The Program assesses ZAA members' commitment and achievements towards positive animal welfare.

It requires them to think deeply about the welfare of the animals in their care and strive for continuous improvement.

# The Accreditation Process

ZAA-accredited zoos and aquariums operate to the highest levels.

They must be assessed every three years to retain their accreditation status.

International members are assessed yearly.
